This material is based upon work supported by the National Science Foundation under grant numbers 0943633 and 1053575 and by the Department of Energy under award number DE-SC0008597. Any opinions, findings, and conclusions or recommendations expressed in this material are those of the authors and do not necessarily reflect the views of the United States Government or any agency thereof.
CILogon – https://cilogon.org/

- Provides personal digital certificates for access to cyberinfrastructure
- Uses federated authentication for user identification
Federated Authentication

- Log on to CILogon using your campus (InCommon) or Google (OpenID) account.
Bridging InCommon and IGTF

- Translating mechanism and policy across higher education and grid trust federations
Multiple Levels of Assurance

- CILogon Silver CA is accredited by IGTF
  - Using InCommon Silver (Level 2) identities
- IGTF IOTA profile for CILogon Basic under development
- Google Authenticator support for second authentication factor
Identifier-Only Trust Assurance with Secured Infrastructure Authentication Profile

Abstract

This is an Authentication Profile of the IGTF describing the minimum requirements on X.509 PKI authorities where the identity vetting is adequate to ensure unique, non-re-assigned identities, and generated by authorities using secured and trusted infrastructure. Such authorities are not required to collect more data than are necessary for fulfilling the uniqueness requirements, and credentials issued by authorities under this profile may not provide sufficient information to independently trace individual subscribers, and should be used in conjunction with complementary identification and vetting processes.

This Authentication Profile is managed by the EUGridPMA.
Integrated with CyberInfrastructure
Integrated with Globus Nexus
Used by OSG Connect

Efficiently connect your science to cycles and data

OSG Connect offers users simple access to distributed high throughput computing resources, and reliable, high-performance file transfer services.

© 2013 Open Science Grid and University of Chicago

www.cilogon.org
Used by CI Connect for Duke

CI Connect for Duke offers users simple access to distributed high throughput computing resources, and reliable, high-performance file transfer services.

Sign In

Using your InCommon / CILogon login.

Click PROCEED to authenticate with InCommon / CILogon.

CILogon and XSEDE

- CILogon is
  - a component in the XSEDE architecture
  - entering the XSEDE engineering process: architecture, design, and security reviews and operational acceptance tests

- XSEDE can provide sustained operational support to CILogon users (DataONE, OOI, OSG, LIGO, etc.)
Adding an IdP to CILogon

- Use self-service web application or contact us for assistance.

InCommon Research and Scholarship program helps services connect with identity providers.
Registered Users Per IdP

Google 25%
LIGO 14%
U Chicago 11%
Indiana U 10%
ProtectNetwork 7%
UCSD 3%
UIUC 2%
UW-Madison 2%
Duke 2%
LBNL 1%
UNL 1%
U Washington 1%
Iowa State 1%
ANL 1%
JHU 1%
% of Total Certificates Issued

- OOI: 56%
- LIGO: 20%
- Other: 12%
- Globus Online: 6%
- IU Gateway: 4%
- DataONE: 1%
- CVRG: 1%
What’s Next

• SAML interfederation
  – InCommon joining eduGAIN this year
  – International attribute release

• Growth of federated online CAs
  – http://redmine.ogf.org/projects/idel-wg

• Level of Assurance (continued)
  – IGTF IOTA profile
  – Int’l adoption of Kantara standards
  – Security incident handling
  – Multi-factor authentication
This map is intended to provide a high-level overview of countries with identity federations.
