From Sci-Fi to Algorithm to Engineered System

**AI in
Pop Culture**

**AI as an
Abstract Concept**

**AI in the
Physical World**

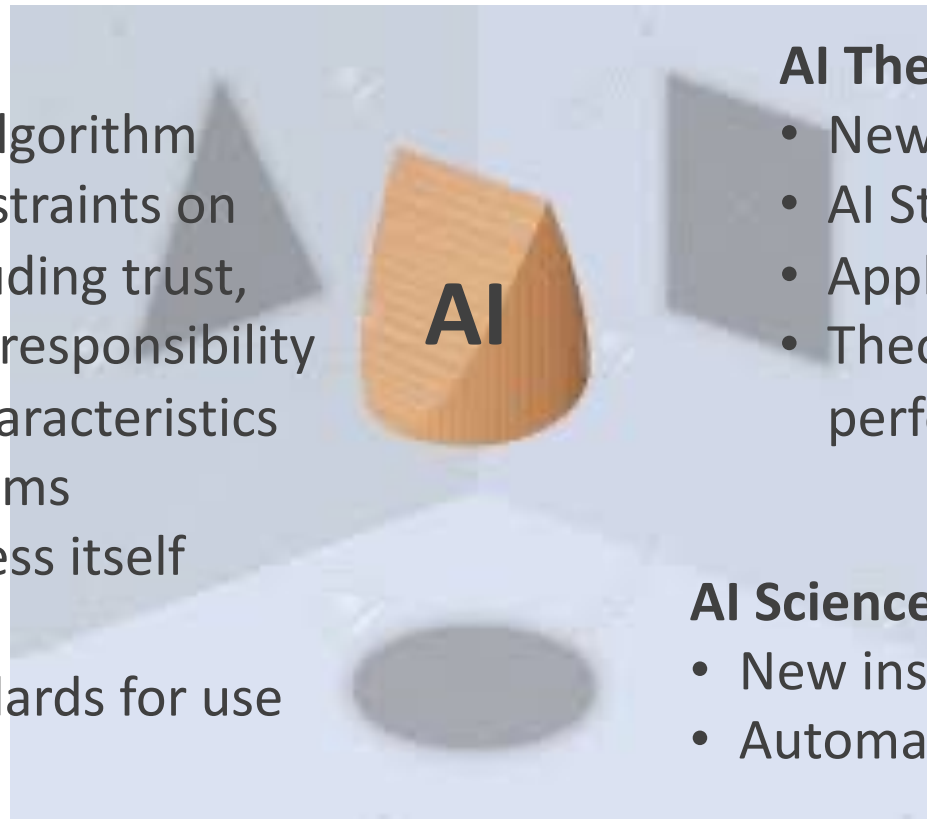

From fantasy to algorithm

From algorithm to engineered system

Artificial Intelligence: Three sides of one “coin”

AI Engineering

- Applications require algorithm performance and constraints on system behavior, including trust, safety, resiliency, and responsibility
- Engineered system characteristics enable better algorithms
- The engineering process itself is transformed
- Development of standards for use of AI

AI Theory

- New algorithms and theory
- AI Stack
- Applications inform theory
- Theoretical bounds and performance

AI Science

- New insights and discoveries
- Automated experiments

AI Engineering Principles

Realizing the potential of AI depends not just upon new advances in AI algorithms and technology

— *it depends critically on the Engineering of AI into systems*

- AI must be engineered in from the start, not bolted on, for it to be effective
- Domain expertise is key and provides a basis for developing AI algorithms and technology that use system characteristics to work dramatically better
- Solutions must be developed within ethical constraints that ensure system scalability, efficiency, robustness, equity and trustworthiness

AI Engineering will transform all engineering disciplines

Cybersecurity and Resiliency

Smart Cities and the Built Environment

Bioengineered Materials

Networked Embedded Systems

Advanced Manufacturing

Energy Systems & Policy

National Technology Policy

Autonomy and Robotics

AI Engineering

Orchestrate the entire life-cycle of AI-enabled engineered systems,

from design to sustainable deployment and operation,
combining domain knowledge with data-driven insights to
improve system function.

AI Engineering Pillars

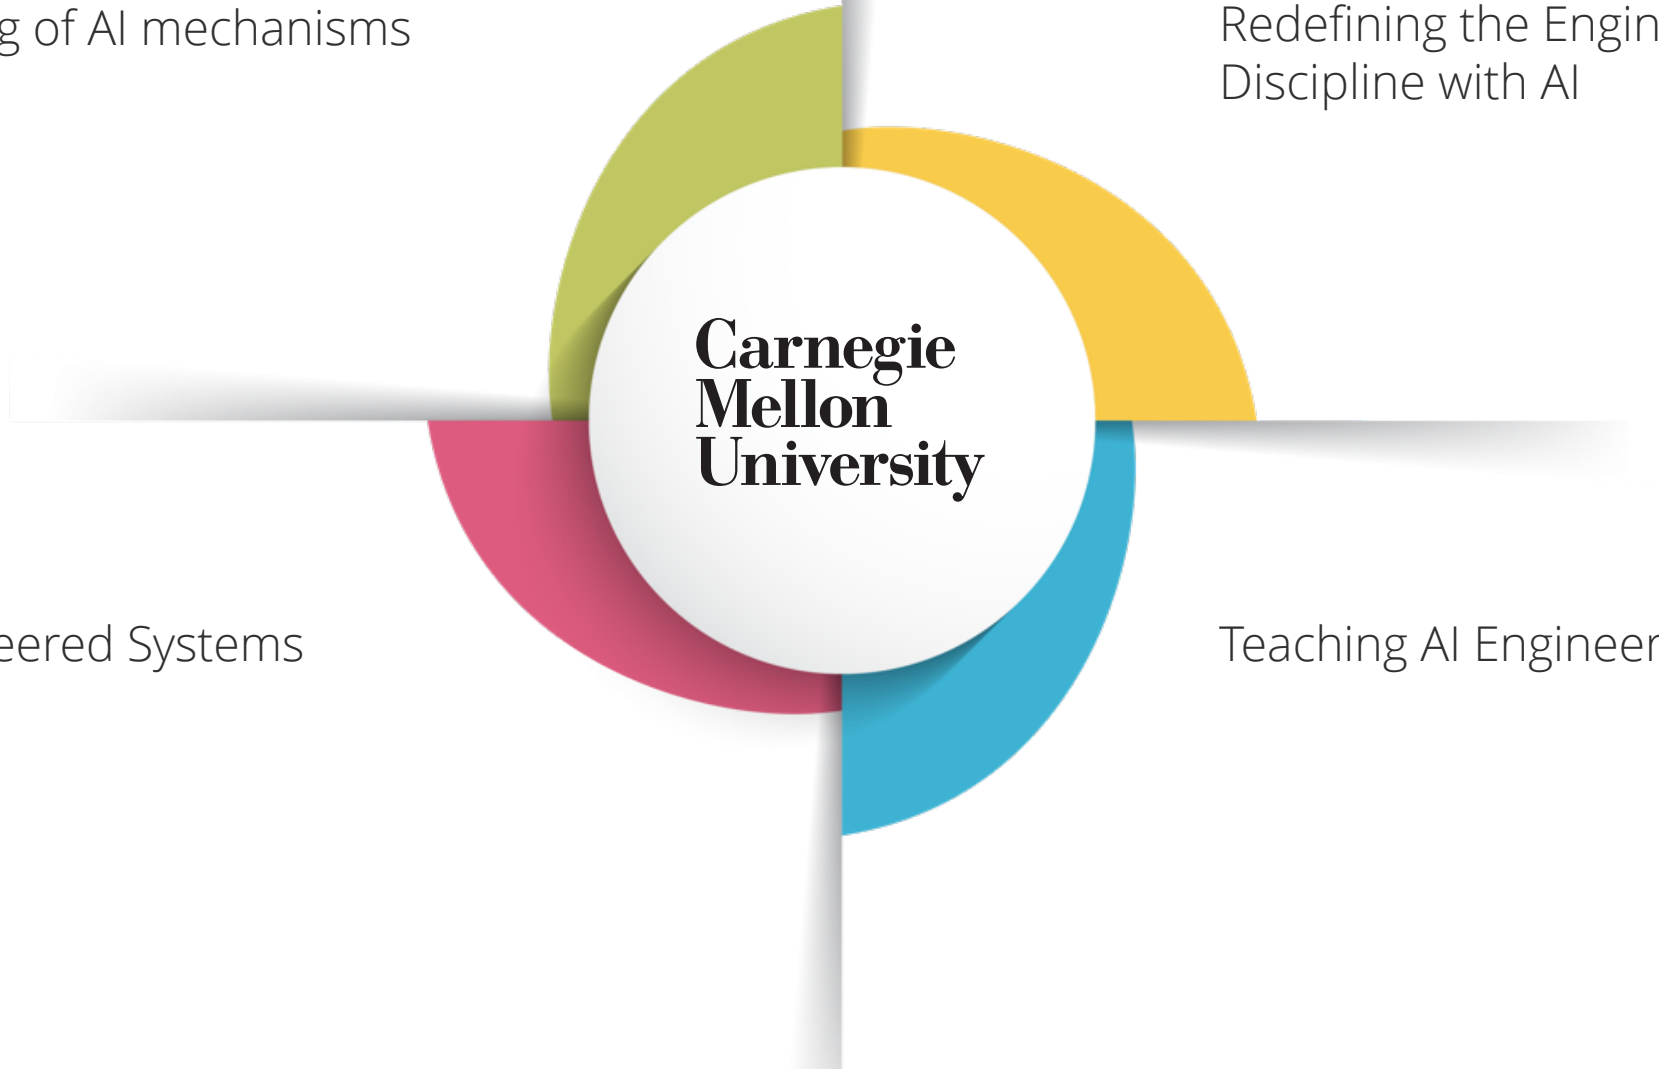

Engineering of AI mechanisms

Redefining the Engineering
Discipline with AI

**Carnegie
Mellon
University**

AI in Engineered Systems

Teaching AI Engineering

Engineering of AI Mechanisms

Engineering compute, sensors, architectural constructs, specialized algorithms and software to orchestrate AI into systems

Hardware for AI

- Network computing architecture serving as a bridge between edge devices and the cloud
- IoT applications can be hosted with advanced security, robustness, performance, and privacy guarantees

Security & AI

- Data driven networking and security
- Data transparency in the absence of trust
- Usable Privacy & Security

AI in Engineered Systems

Build AI-orchestrated products and services that are more functional, safe, secure and resilient

20 Million Patients in USA Suffer Limb Paralysis

- To restore motor function after stroke, CMU is leveraging AI/ML to electrically stimulate neural networks in spinal cord
- Data used to learn representation of stimulation parameters conditioned on muscle activity, joint-torque, and movement
- Use the nonlinear, state-dependent neuromuscular system as model constraints to generate stimulation parameters for targeted biomechanics

Intervention

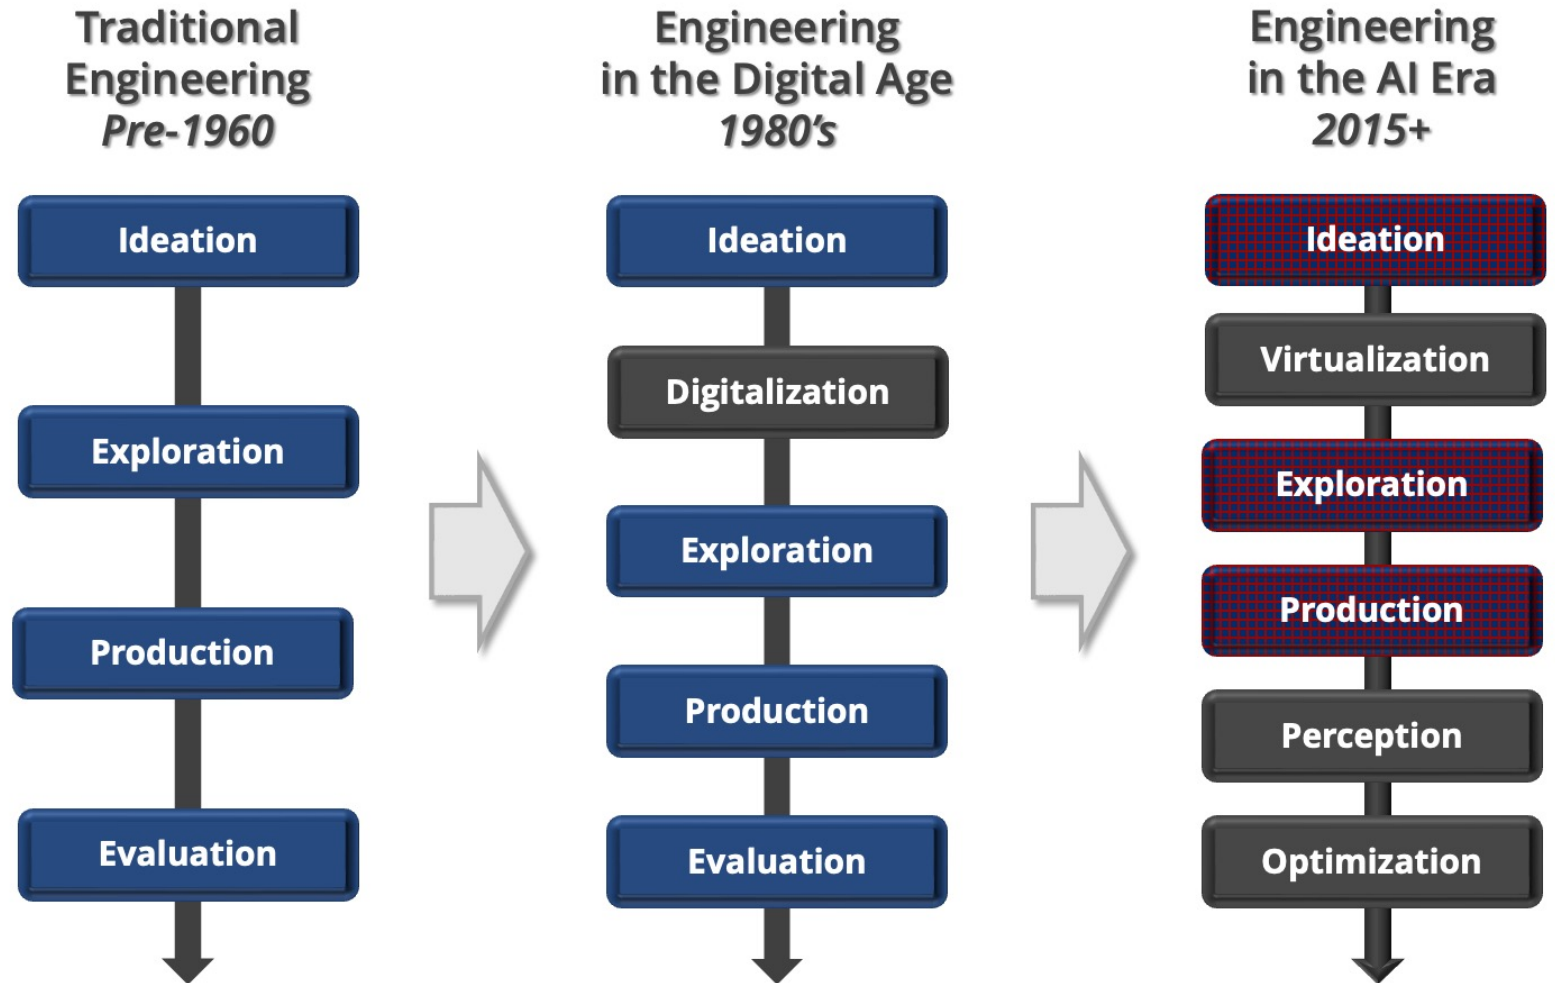

- Wearable sensors detect user's actions
- Stim controller selects task-appropriate patterns for stimulating spinal cord

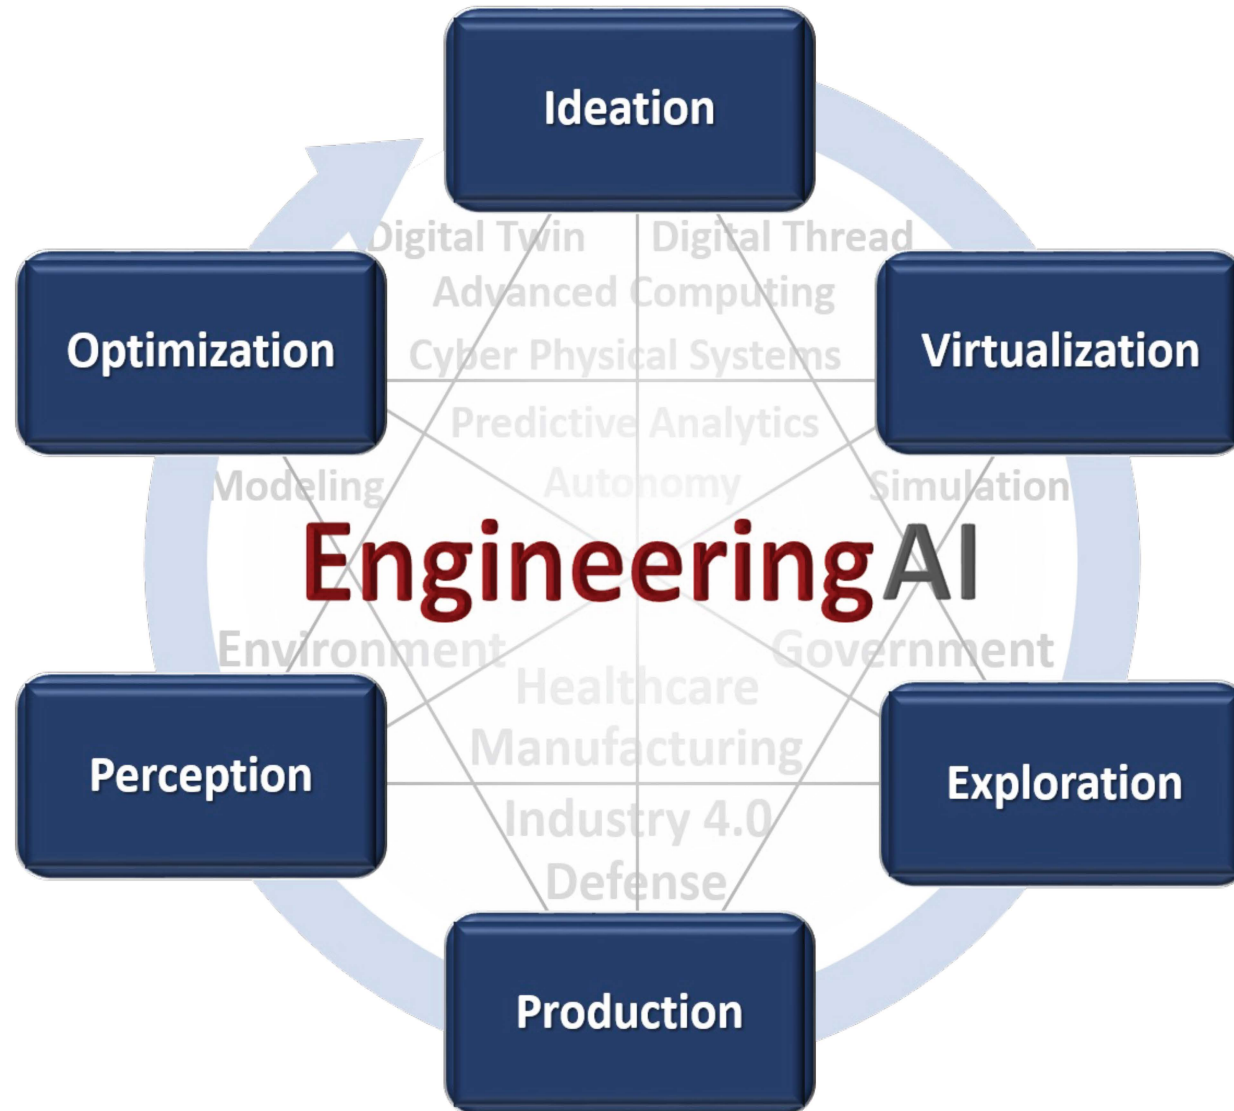

Professor Doug Weber

Redefining the Engineering Discipline with AI

Much as computer aided design and modeling did in the past, AI is in the process of reshaping the way engineers work and the way they approach problems.

Exploration: AI as a Manager in the Engineering Design Process

- Teams designed drone fleets and package delivery plans
- Agent uses prior data to track team performance
 - How often people talk,
 - what they say to each other,
 - what changes to the design they make
- Agent then decides whether to intervene with nudges to the human team members
- The AI manager performed equally to the human manager

Three modes of human-AI teaming:

INPUT	Tradeoff between communication and action	Choose one measure most off track	OUTPUT - Intervention
HyForm Data Action Communication		Action Categories Within bounds Communication Semantics Communication Frequency	Ops. planners, it would be good to continue working on and refining your plans a bit more.
			Hey operations team, I suggest that you try evaluating and submitting your plan and starting fresh.
			Hey operations team, try running the path-planning agent to help.
			Drone designers, it would be helpful if you can continue working on and refining your drone designs a bit more.
			Hey drone design team, I would recommend evaluating and submitting your current design and starting fresh.
		Design Parameters Content Strategy Content Semantic Similarity	Hey drone design team, check out the suggestions from the drone design agent.
			No Intervention
			Team, I think you should try focusing more on adjusting the design parameters to meet the goals of the problem, and share this with each other (cost, capacity, speed, budget, weight, etc.)
			Team, try focusing more on your strategy. Try optimizing and increasing/decreasing size of components and share this with each other.
			Hi team, try sharing your goals with each other a bit more and make sure they're aligned.
			Ops team, please try to communicate with each other more.
			Drone designers, please try to communicate with each other more.
			Hi problem manager, please try to communicate with your team more.

Educating AI Engineers

Teach the state-of-the-art knowledge in AI from a unique engineering perspective

AI Engineering MS Degrees

Pittsburgh PA

- Mechanical Engineering
- Electrical and Computer Engineering
- Information Security Engineering
- Biomedical Engineering
- Chemical Engineering
- Civil and Environmental Engineering
- Materials Science and Engineering

Kigali, Rwanda

- Engineering AI

Introducing a new AI Engineering Curriculum

CMU's College of Engineering is the first in the nation to introduce a coordinated set of Master's degrees teaching how to engineer AI into a broad set of systems:

- MS in AI Engineering – Biomedical Engineering
- MS in AI Engineering – Chemical Engineering
- MS in AI Engineering – Civil and Environmental Engineering
- MS in AI Engineering – Electrical and Computer Engineering
- MS in AI Engineering – Information Security Engineering
- MS in AI Engineering – Materials Science and Engineering
- MS in AI Engineering – Mechanical Engineering

Building on an Engineering AI MS degree launched at CMU-Africa in Fall 2021.
