From: Koujaian, Harry

Subject: "RFI Response: Federal Cybersecurity R&D Strategic Plan"

In regards to question # 5

What changes to cybersecurity education and workforce development, at all levels of education, should be considered to prepare students, faculty, and the workforce in the next decade for emerging cybersecurity challenges, such as the implications of artificial intelligence, quantum computing, and the Internet of Things on cybersecurity?"

To make things fun, more video game simulations should be incorporated into Cyber education. For example, the games should present scenarios and list of mitigation techniques for them to defend the network,. Games such as Sim City were popular because of their simulations and instance feedback
With best regards
